

Guide Concerning Accomplishment of Diagnostic Analysis in Health Units

Aurelia ALDEA, Research Worker

Abstract: Sanitary economy has consolidated its position in the tertiary sector in the last decade, after a period of uncertainty caused by a theory which started that health resources should not be limited.

But any country cannot have unlimited resources, especially less in the health care organization from our country, which still has serious problems related to the resources volume and with quality services in the same time with risks reducing. Doing a rigorous diagnosis analysis to emphasize the unfunctionalities, strengths and weaknesses of the health care organization guarantee the efficacy of the health care management.
